

Description

In this homework, you are going to use Jupiter RISC-V simulator to develop a simple calculator which supports seven operators, addition, subtraction, multiplication, division, remainder, power and factorial.

After finishing this homework, you will be familiar with the usage of Jupiter RISC-V simulator, register definition, and some basic operations in RV32I Base Integer Instruction Set.

Requirement

The calculator should support the following operations: $+$, $-$, \times , $/$, $\%$, $^$, $!$.

Input format:

A

$operator$

B

Output format:

[Result]

$0 \leq A, B \leq 1024, op \in \{0, 1, 2, 3, 4, 5, 6\}$

If $op = 0$, calculate $A + B$ and output the result.

If $op = 1$, calculate $A - B$ and output the result.

If $op = 2$, calculate $A \times B$ and output the result.

If $op = 3$, calculate A / B and output the result. (Quotient).

If $op = 4$, calculate $A \% B$ and output the result. (Remainder)

If $op = 5$, calculate A^B and output the result.

If $op = 6$, calculate $A!$ and output the result. (In this case, $B = 0$)

If division by zero occurs, the program should print "*division by zero*".

If remainder by zero occurs, the program should print "*remainder by zero*".

(Don't worry about overflow or underflow.)

Input

Every input file has three lines. The first line contains a non-negative integer A , the second line contains a non-negative integer op , the third line contains a non-negative integer B , corresponding to the first operand, the operator, and the second operand.

Output

The output should contain only one integer that is the result of the input equation.

Sample Input 1

7
0
4

Sample Output 1

11

Sample Input 2

7
3
4

Sample Output 2

1

Sample Input 3

7
4
0

Sample Output 3

remainder by zero

Sample Input 4

3
6
0

Sample Output 4

6

Grading policy

For operations `+`, `-`, `×`, `/` and `%`, each operation has 4 testcases, 3 points per testcase. For operations `^` and `!`, each operation has 5 testcases, 4 points per testcase.

We will judge the correctness of your program by running the following instruction on CSIE workstation.

```
$ jupiter [student_id]_hw2.s < input_file
```

10 points off per day for late submission.

You will get zero points for plagiarism.

Submission

Due date: 10/26 23:59

Please name your program file **[student_id]_hw2.s** and upload it to NTUCOOL.

For example, if your student id is **b12345678**, your program file name should be **b12345678_hw2.s**.
